

DIEBOLD ACTIVGUARD CONSOLIDATED ATM SECURITY MANAGEMENT

UTILIZE A SIMPLIFIED SETUP FOR ADVANCED FUNCTIONALITY.

Today's banking environment necessitates a comprehensive, multi-layered approach to terminal security. Diebold ActivGuard™ makes it easier than ever to manage the various protective layers that keep ATMs safe. Functioning as an innovative security "nerve center," it increases efficiency and reduces cost by consolidating security functions into a single embedded system. All while providing enhanced security to ensure safe transactions and inspire trust.

EFFICIENT, SECURITY PLATFORM

ActivGuard features an electronic circuit card that acts as a central interface for all terminal security devices. It collects critical information and passes it along to the ATM processor or external alarm systems through secure USB communication.

UPGRADES

Available on new ATMs or as an upgrade, ActivGuard supports 12 input and 12 output signals, and enables data collection. Rely on ActivGuard for:

- Intrusion detection (ambush, top cabinet and fascia)
- Thermal and seismic sensor alerts
- Status monitoring (safe door, lock bolt, battery and air conditioning)
- Advanced-function dispenser fraud detection
- After-hour depository timeout alerts
- Skimming and logical security alerts

We've got a solve for that.™

A LAYERED DEFENSE ELIMINATES WORRY FROM DAY-TO-DAY OPERATIONS.

ENHANCE SECURITY OFFERINGS

The location of a central security processor inside the ATM safe restricts unauthorized access, while improved top cabinet protection deters internal fraud and malware attacks. In addition, ActivGuard features four dry contact points for self-powered sensor inputs, such as tilt, gas or smoke detectors, which offer fraud and hazard protection.

STREAMLINE OPERATIONS

ActivGuard provides the architecture, message structure and storage to allow alarm mapping, as well as the ability to customize and report alarms to a central monitoring station to speed troubleshooting. It also enables access to the ATM for auditing purposes, and bolsters internal security. This makes off-premise protection easy, eliminating the need for a third-party contract.

REDUCE COSTS

A centralized wiring hub means diminished installation and maintenance costs and improved reliability. Similarly, ActivGuard's false alarm reduction features can result in fewer fines paid for unnecessary calls. And, enhanced security measures yield reduced losses associated with fraud, as well as physical and logical attacks.
