

DIEBOLD MOBILE CASH ACCESS

TRANSFORM ATM TRANSACTIONS BY INTEGRATING SMARTPHONE TECHNOLOGIES.

The smartphone has evolved into a dynamic and robust retail device. Every day, millions of consumers use their phones to make online purchases, download instant coupons and even order their lunch. So it's not surprising that consumers are also looking at their phones to get cash. Diebold has delivered with Mobile Cash Access, an innovative new technology that allows consumers to complete ATM transactions more quickly, more safely and without using an ATM card. For use with the Diebold Agilis® 3 software platform, Diebold Mobile Cash Access is fundamentally changing how consumers interact with the ATM.

INTEGRATE WITH MOBILE WALLET*

Mobile Cash Access was designed to integrate seamlessly with the Mobile Wallet* banking application, allowing financial institutions to guide payment choice, optimize interchange revenue and drive loyalty.

CAPITALIZE ON TECHNOLOGY

Capitalize on the impact of mobile technology to increase revenue opportunities and provide greater security.

* Mobile Wallet is offered through a partnership with Paydiant, Inc. Our partnership allows Diebold to offer cloud-based, white-label mobile payment and a redemption platform that interacts with existing FI ATMs without requiring new hardware.

We've got a solve for that.™

MOBILE CASH SERVICES ARE JUST ANOTHER WAY DIEBOLD IS INNOVATING THE NEXT GENERATION OF CASH AND PAYMENT SOLUTIONS.

ACCELERATE SELF SERVICE

Customers can expedite the process by pre-staging transactions, choosing which account to access and the amount to be withdrawn. With Mobile Cash Access, consumers scan a quick-response (QR) code on the ATM screen from any smart device, including tablets. Cloud authentication allows the user to perform transactions without a card, while two-factor authentication keeps transactions secure.

IMPROVE SECURITY AND DECREASE FRAUD

Because Mobile Cash Access eliminates the need for an ATM card, it dramatically reduces the chance of skimming at the terminal. It also reduces the opportunity for fraud and theft, since sensitive customer information is never stored on mobile devices and is passed via a secure VPN to payment terminals or ATMs.

REDUCE PAPERWORK AND CUT COSTS

With Mobile Cash Access, customers are sent e-receipts of their transactions and have access to their transaction history from their smart device. Because paper receipts are eliminated,

Mobile Cash Access not only helps financial institutions improve the customer experience, but also it helps them reduce costs.

ACHIEVE SEAMLESS INTEGRATION ACROSS ALL PLATFORMS

Mobile Cash Access works with iPhone® or Android™ applications, allowing use of the technology while maintaining control of transaction data, brand and customer experience.

Not available in all regions.

YOUR ATM FLEET IS CAPABLE OF MORE. MOBILE CASH ACCESS IS JUST ONE OF MANY SOFTWARE LED SOLUTIONS THAT INTEGRATE WITH THE DIEBOLD COMMITMENT TO PROVIDING HIGHLY PERSONALIZED CARE. CONTACT A DIEBOLD REPRESENTATIVE TODAY.
