

DIEBOLD SOFTWARE DEPLOYMENT SERVICES

ACHIEVE ENHANCED SECURITY AND SMOOTH OPERATION.

As the financial-services industry becomes more dependent on complex, software-driven capabilities, the user experience becomes richer and more intuitive. However, due to increasing security risks and new regulations, maintaining a software-led experience can be costly and overwhelming. In fact, studies indicate that average cost of remediating a single-application security incident is as high as \$300,000. Diebold Software Deployment Services can help. As a fully integrated management platform, it keeps your software stack up to date and your network secure, efficient and available.

ENSURE NETWORK STABILITY AND PERFORMANCE

As a managed service, Software Deployment Services provides comprehensive software maintenance – with none of the worry. Boosting reliability, it features OS patch management for remote deployment of all Microsoft®-issued security patches applicable to the ATM environment.

ACCESS AT YOUR FINGERTIPS

Keep your software stack up to date – remotely.

We've got a solve for that.™

SOFTWARE DEPLOYMENT SERVICES HAS PUSHED OUT NEARLY 1,000 SECURITY PATCHES.*

INVEST IN A BETTER OPERATING SYSTEM

For financial institutions, Software Deployment Services is essentially an investment in functionality. It optimizes software performance, while working as a behind-the-scenes partner to enable advanced security and uninterrupted service.

Timely delivery - Remote deployment ensures fast, efficient updates of OS patches and upgrades.

Maximum reliability - Diebold pretests patches against factory software images prior to deployment for greater accuracy.

Streamlined inventory - Securely log in and view a report of all deployments within a network.

Enhanced security - A managed service gives financial institutions the assurance that external and internal vulnerabilities are kept to a minimum, and all security patches are current.

Improved costs - Reduce costs associated with technician dispatch for software-related service.

Consumer confidence - Strengthen relationships with the most up-to-date security features and increased availability.

INITIATE A PROACTIVE APPROACH

Advanced identification and tracking abilities empower financial institutions with the knowledge of exactly what is at work - and where - within a system. Software Deployment Services manages a fleet's desired state, checking every night to make sure each ATM has been re-imaged with the most recent patches. When the desired state is out of sync, Diebold remotely detects, repairs, installs and updates the managed policy. In addition, encrypted PIN pad (EPP) data retrieval is available as an optional service on Diebold ATMs to aid in security initiatives and audits.

** Software Deployment Services was initially offered in 2007. Windows XP end of life was April 8, 2014.*

YOUR ATM FLEET IS CAPABLE OF MORE. SOFTWARE DEPLOYMENT SERVICES IS JUST ONE OF MANY SOFTWARE LED SOLUTIONS THAT INTEGRATE WITH THE DIEBOLD COMMITMENT TO PROVIDING HIGHLY PERSONALIZED CARE. CONTACT A DIEBOLD REPRESENTATIVE TODAY.
