

Title: PCI LAN submodule 10/100MBit (3c905B based) - DOS Setup 1.00A10

Release Date: 05.07.2001

Expire Date: 22.02.2222

Content:

MS-DOS 6.22 SETUP disks for PCI LAN sandwich 10/100MBit ver 1.00 A10

(diskette image and manuals *.PDF)

QUICK INFO:

- 1) Insert writeable 1,44MB/3,5" floppy into floppy drive
- 2) Start PCILAN13.EXE (image of setup disk 1/3)
- 3) Set parameters as needed:
If floppy contains different data before, it is good practise to choose FORMAT & VERIFY and press F1.
If floppy already is formatted press F1 only.

In both cases floppy data will be overwritten !!!

REMARKS:

- a) The floppy image PCILAN13.EXE contains MS-DOS ODI driver, diagnostics tool LBSETUP and README files.
The manuals you will find directly on this site; see *.PDF !
- b) You can run PCILAN13.EXE under Windows (NT,98) !!!
If your browser does not run PCILAN13.EXE, save it to your local harddisk, append EXE extension to file and start it again !
