MASTER DATA SERVICES

Quick and easy access to information is a critical dependency for managing any business initiative. Incomplete or inaccurate data can either slow down decision-making or result in errors. The self-service fleet is no exception. Accurate and timely details are critical when making decisions and investments. Master Data Services is a set of Managed Services that provides you with data and information about your self-service fleet, right when you need it.

Inventory Management, one of the offers within the Master Data Services, provides detailed information about the hardware and software configuration of your self-service fleet, giving you the insights you need to be successful. Available through Diebold Nixdorf's Managed Services web portal, the inventory management feature has editable fields allowing you to add information uniquely important to specific locations.

INVENTORY MANAGEMENT PROVIDES THE FOLLOWING

Component and configuration details

- Standard hardware and software configuration
- Base data including BIOS, storage devices and peripherals
- Network details such as IP information, modems and net-adapter
- Matched and native versions of software products

Fast and automated retrieval of inventory data including hardware and software information through the Diebold Nixdorf Managed Services web portal

Reporting capabilities including the ability to group systems data based on the pre-defined values and customizing reports for each use

Delivers data and information that is critical to **Software Lifecycle Management**

Secure access based on user privileges

**GAIN IMPORTANT INSIGHTS INTO YOUR SELF-SERVICE FLEET.
