

Physical presence with ready-to-use or customized mini branches

As FI's branch network keeps being transformed continuously you need efficient and fast self-service branches with small footprint? New branch formats like self-service locations as full mini branches are a swift and efficient option to keep physical presence. Diebold Nixdorf offers flexible and modular models and styles of mini branches—make your choice for your location and your needs.

DN's Mini Branch Implementation Services provide end-to-end services from planning to implementing these flexible branch formats including architectural design, implementation of the required IT infrastructure, construction work and the coordination of all involved parties.

- We offer ready-to use standard models, which will be customized in terms of IT equipment and your brand appearance. More specific requirements can lead to individual solutions based on our modular concept.
- End-to-end project completion is efficient and swift, with a standard format taking about two to three months for delivery.
- With this we see mini branches also used as temporary solutions - e.g. in case of reconstruction phases of flagship branches, during events or building up after natural disasters.
- A mini branch solution is an attractive ambassador of FI's brand - no matter if it is built in a new and small location or replacing a traditional branch. In rural areas it is an efficient alternative to keep physical presence.
- Specific security needs and regulations can be met with mini branches quickly.

Diebold Nixdorf provides consultation for such flexible branch formats. We will analyze the location and create a concept with the right format and materials for your situation.

High Variety of Standard Models in Two Product Lines

Diebold Nixdorf offers two different series of mini branches. One extremely secure product line is based on concrete. These models defy physical attacks and fulfill the highest security certifications. The other series is a lighter and cost-efficient solution made from steel and glass. Lighting and advertising spaces make our models an attractive brand ambassador. The majority of the branches are unstaffed branches, but DN has also innovative options for staffed solutions.

Mini Branches with concrete housing
PRISMA model

Mini Branches based on steel & glass
CASH-POINT PAVILION model

DN's mini branches models span solutions from smallest footprint with one multifunctional ATM to fully equipped formats with up to four or five devices or even workplaces if needed. We provide outdoor solutions as well as indoor models depending on FI's needs - rectangular or round ones, all equipped with the technology you need.

Concrete models: With our PRISMA model with one ATM for outdoor usage you have a solution with smallest footprint under 6 m². Within the same small footprint we can offer the round model WINDOW with one or two through-the-wall ATMs installed. Round models for indoor usage are available as well. More systems can be offered in rectangle formats –designed for indoor usage of up to 3-4 in our MAXI model.

All concrete models benefit from the strength of material and construction, which defy physical attacks and offer best fire protection classes and resistance class III.

Steel models: Our smallest formats with one outdoor ATM are CASH-POINT BASIC or CASH-CUBE BASIC within 7 m² to 8,5 m². Indoor models like the CASH-POINT PAVILION offer space for 2-3 indoor devices where as SUPERIOR PAVILIONs have up to 4 devices within 32,5 m². Within the steel product line we also offer attractive drive-up solutions, that are prominent and visible for your customers from afar.

All models provide highest quality standards and meet resistance class III.

DN provides consultation for our flexible branch formats. We analyze the location and create a concept with the right format and materials for your situation.

Once you have made your choice and we defined the branch model including its equipment, your brand, your message will be integrated with help of our top-notch design. Together we configure your branch entries (consumers' lobby, maintenance area), define colors and materials of the branch front and the interior, talk about logos, images, regional design influences and the ideal placement and usage of advertising spaces. When it comes to implementation onsite the majority of DN's mini branches can be set up within 1 day and you receive the key for your ready-to-use solution.

Bring your implementation project to life the right way. Contact your Diebold Nixdorf representative to get started.

WHY DIEBOLD NIXDORF?

DN AllConnect ServicesSM offers industry leading services that provide tailored, end-to-end solutions with a customer-first view. We help banks, credit unions and retailers accelerate their performance on a global scale. Using the foundational strength of our top-rated, technically trained service experts combined with data intelligence, we maximize availability and performance of your self-service channel while ensuring always-on compliance and security. From maintenance operations to business solutions to data-driven insights, only DN AllConnect Services delivers the expertise and innovation to help businesses thrive by identifying today's efficiencies and tomorrow's opportunities.
