

A Flexible Software Platform that Enables your Self-Service Network to do More

Despite the move to digital and mobile technologies, the self-service channel remains a key component of a critical macro trend: connecting the physical world to the digital world.

Strongly influenced by experiences with personal computing, mobile technology and multichannel retailing, today's consumers define the ideal banking experience as one that is easy, fast, secure, consistent and personalized. Our approach to self-service software matches that expectation and redefines how consumers connect with their financial institutions (FIs), making the experience more intuitive, quick, safe and personal. With VCP-Pro as the single software interface, FIs are able to maximize efficiencies in maintenance and replenishment, and provide a consistent, interactive consumer experience regardless of the manufacturer.

FLEXIBILITY FOR YOU AND YOUR CONSUMERS

- Supports location-aware themes, business rules and messaging across ATMs and kiosks, regardless of vendor
- Offers an intuitive interface with individualized functionality and content
- Allows consumers to change their preference settings independently at the terminal*
- Enables the use of customer-based preferences, such as a personal fast cash amount, preferred language and receipt preference*
- Makes customer-selected bill mix a standard transaction capability where supported by the network
- Permits targeted marketing by BIN, by transaction and time of day*

SIMPLIFIED, STREAMLINED PROCESSES

- Supports on-us transactions that connect directly to core systems*
- Integrates easily with host systems and web services to boost self-service revenue generation
- Reduces the need to make modifications to the host to support new features, devices and transactions
- Allows operators to make configuration changes remotely from the host without requiring a reboot of the terminal
- Eliminates vendor-matched software and protocols and uses a single ATM application to run an entire network from one host

MULTI-VENDOR FUNCTIONALITY

VCP-Pro powers self-service options across devices, and delivers meaningful interactions between consumers and their FIs. The accompanying pre-packaged ATM application features the most commonly used consumer and settlement transactions and functionality that can be deployed "as is," with the option to add on additional functionality as desired

*Additional software may be required

VCP-PRO makes it easier than ever to connect physical and digital touchpoints.

FEATURES

- Rich graphical interface
- Multichannel
- Industry standard protocols: CEN-XFS, IFX, NDC, SNMP, SOA, WMI and more
- Operating system support: Microsoft Windows® 7 and Windows 10
- WebApp built on Angular 9+

SECURITY

- EMVco Level 2
- Remote key management

CONFIGURABILITY

- Integrated development environment (IDE): Developer Workbench (optional)
- Simulation tools: Developer Workbench (optional)
- Test tools: Developer Workbench (optional)
- "Look and feel"
- Transaction flow
- Multiple languages
- Customizable receipts
- Voice guidance
- Easy to customize transaction flows using WebApp industry standard tools.

Note: VCP-Pro is powered by VISTA

STANDARD TRANSACTIONS

- Withdrawal, fast cash, customer-selected bill mix, dynamic currency conversion
- Deposit (envelope, cash, checks, mixed, parallel)
- Touchless prestaged cash withdrawal and deposit
- Recycle
- Electronic and envelope payments
- Single balance print or display, print statement
- PIN Services: change PIN
- Stamps, coupons
- Multi-language, audio support
- Secure user and role-based access, financial replenishment, media replenishment, diagnostics, vendor diagnostics, terminal set-up

CONNECTIVITY

- Optional components can be purchased to extend the functionality of VCP-Pro
- Vynamic view
- Vynamic branch
- Vynamic marketing
- Campaign management
- Personalization
- Monitoring and event management services and managed security services via AllConnect self-service fleet management
