

Antimicrobial Protection Service Plan

Persistent, Continuous, Clean

Maintaining health and safety is more complex than ever. As a measure to ensure the utmost in cleanliness and safety, it is important to regularly disinfect commonly-touched hard surfaces, including the interfaces of ATMs and self-service solutions. DN AllConnect ServicesSM provides much-needed maintenance and support for our customers through our Antimicrobial Protection Service Plan. Our plan utilizes a system registered with the EPA to disinfect surfaces and provide longer-term protection to inhibit the growth of bacteria, fungi, algae and viruses on surfaces.

SERVICE INCLUDED

Step 1 – Disinfectant

A disinfectant is applied to the surface to kill mold and mildew spores and 99.999% of bacteria including eColi, Salmonella and Listeria in less than 60 seconds. The disinfectant product is an EPA-registered, hospital-grade disinfectant, non-irritating to the skin and non-corrosive to surfaces.

Step 2 – Antimicrobial Surface Protectant

The antimicrobial application inhibits the growth of odor- and stain-causing bacteria by forming a covalent bond with the substrate and creating an inhospitable surface for growth of problematic microorganisms.

Benefits

Large Spectrum Performance

Effective against a large array of mold, mildew, algae and fungus

Unmatched Versatility

Can be applied to a wide variety of porous and non-porous surfaces

DN Approved

This process has been approved by our Engineering Team as safe to apply to our equipment
