

Make Sound Business Decisions Using Data from Your Network.

According to a recent study, more than two-thirds of all data is never analyzed or used.¹ With your devices able to communicate several thousand different events via Vynamic View, the amount of information available offers enormous potential.

By leveraging this collected data, Vynamic View Business Intelligence Manager can discover areas to optimize your device network and plan future needs based on historical data.

DETERMINE COMPLIANCE AND SECURITY REQUIREMENTS

Vynamic View Business Intelligence Manager allows you to look at your network holistically as well as individually, and analyze if there is a specific requirement that needs satisfied.

- Is there a need to protect specific locations or machines?
- What protection methods are the most successful?
- Are all devices equipped with the latest software/firmware for compliance?

INTELLIGENTLY PLAN FOR FUTURE INVESTMENTS

Vynamic View Business Intelligence Manager can analyze the performance of your network based on make/model/configuration and functionality. This data can assist in specifying the scope of future purchases.

- Which vendor's devices perform best?
- Are the terminals configured to best suit our consumer profile?
- Does the current fleet satisfy the demands of our market?

EVALUATE SERVICE CONTRACTS AND PROVIDERS

Multiple devices often means multiple service vendors performing different tasks within your device network. Vynamic View Business Intelligence Manager can evaluate which has the best service levels and terms.

- Which has the least amount of SLA violations?
- Which has the best response rates?
- Which has the best performance ratio — fix once vs. multiple?

FEATURES

- Allows access to the Dynamic View database using business data dictionary.
- Users do not need database know how to use the data and build their own reports.
- A set of reports and dashboards is delivered with the product in the following domains:
 - Availability analysis
 - Cash analysis
 - Incident Analysis
 - Inventory Reporting
 - Transaction Analysis
- For the set of available reports, it is also possible to:
 - set filters for the report
 - drill down into data
 - export the report
 - print the report

BENEFITS

- Highest transparency on collected data
- Business level consolidated information
- Users have the ability to ask and answer their own questions
- Access to data anytime, everywhere
- It allows the stakeholders to analyze, report and share the information in their organization.
- Process improvement through historical data analysis

DIEBOLD NIXDORF VYNAMIC SOFTWARE

DN Vynamic is a powerful software portfolio that enables financial institutions to eliminate friction to transform the user experience and the operation. Flexible and adaptable, DN Vynamic is built to align with how financial institutions operate and are bundled to support the modern banking environment including channels, payments, engagement and operations.
