

Safer, Easier, Faster Software Updates, Delivered Remotely.

Keeping pace with technology updates can be costly and time consuming.

Regardless of whether your network is five devices or 50,000, the effort to constantly update and keep a record of current configuration is a tiring task, especially if your network is composed of different makes and models. Comprehensively managing the network centrally for remote administration and maintenance can help you simplify processes, increase efficiency, and significantly reduce your total cost of ownership (TCO).

By offering remote deployment capabilities to ANY device in your network from a central console, Vynamic View Software Manager can reduce the time and effort it takes to update self-service software and add new policies. Additionally, Vynamic View Software Manager enhances the security of the self-service network by controlling the type and functionality of software distributed and limiting access to authorized users.

KEEP YOUR SOFTWARE STACK UP TO DATE

Remote dispatching of OS security patches and application updates optimizes software performance and maintains compliance.

- Strategically deploy software updates from a centralized console
- Schedule distributions at timely intervals to ensure optimal uptime of device
- Ensure PCI requirements are quickly satisfied

OPTIMIZE NETWORK TRAFFIC WITH SOFTWARE PACKAGES

Communication traffic can be optimized through the use of distribution packages that use intermediate file servers. Servers can be cascaded, building unlimited hierarchy levels for more efficient throughput and installation time.

- Software package includes control files for the installation as well as for pre-/post-installation activities
- Distribution can be on demand or scheduled
- Software can be distributed on single devices, hierarchy or groups of devices

IMPROVE MAINTENANCE COSTS BY REDUCING PHYSICAL VISITS

Complemented by Vynamic View Inventory Manager, Software Manager can accurately target specific versions of software configurations for upgrades.

- Plan maintenance and upgrades strategically to the entire channel
- Dispatch all levels of the software stack or just individual components

Vynamic® View Software Manager

FEATURES

- Provides automated reports on software installation status, failure and completion
- Offers functions to manage software packages
- Manages software distribution jobs
- Upload and download single files
- Audit all file upload/download operations and software distribution activities

BENEFITS

- Multi-vendor Solution: Works with any Microsoft® Windows®-based device
- Can be used individually or with other Vynamic View Managers

CONNECTIVITY

Able to connect to any machine running Microsoft or Linux®.

DIEBOLD NIXDORF VYNAMIC SOFTWARE

Vynamic Software is a powerful software portfolio that enables financial institutions to eliminate friction to transform the user experience and the operation. Flexible and adaptable, DN Vynamic Software is built to align with how financial institutions operate and are bundled to support the modern banking environment including channels, payments, engagement and operations.
