

Chassis- and Safe-Enforcer

Protection against explosives, gas and other physical attacks.

Physical attacks on ATMs are taking place all over the world and causing considerable damage.

Explosive attacks are a global problem that can cause financial losses – not only from damages to the ATM but also collateral damage to its surroundings – financial losses of more than \$1 million, damage to the brand image and even harm to innocent bystanders. Using brute force, criminals gain access to the top compartment of the ATM. Then the explosive material – either a gas or solid explosive – is inserted into the ATM and then triggered remotely or on a timer.

DELAY THE ATTACK AND GAIN REACTION TIME

For a successful explosive attack, would-be-criminals need three main ingredients: a gas or solid explosive together with strong tools, a get-away vehicle and – crucially – time. Financial institutions (FIs) can thwart attacks by making access as difficult as possible. This will delay criminals, buying FIs and law enforcement the time they need to react. Strengthening the chassis and safes forces attackers to invest more time. This increases their risk of being caught and may stop the attack.

THE DN SERIES™ ENFORCER PACKAGES ARE MORE SECURE AGAINST BLASTING ATTACKS

The Chassis and Safe Enforcer Packages are the most advanced protection against explosive, gas and physical attacks. They can delay criminals three to four times longer than traditional barriers. By encasing the ATM in specially engineered materials, the DN Series ATMs become Diebold Nixdorf's strongest systems ever.

Solution Details

CHASSIS ENFORCER PACKAGE

- Additional fascia latches with 4-point locking mechanism
- Reinforced ribbed side paneling and bolts and additional drilling protection plates covering the fascia locks
- Reinforced ribbed rear door/ back cover with strong locking bars and drill protected lock

SAFE ENFORCER PACKAGE

- Head locking module with drilling protection
- Head module reinforcement (exclusive for CMD-V6)
- Cable hole caps
- Strengthened base brackets, mounting bolts and steel coverings with drilling protection
- Drilling protection on sensitive areas with special material

Benefits

- A several-minute delay means police have time to respond.
- Limits damage and possibly stops the attack.
- Saves millions worth of damage and possible lives.
- Delaying the attack is the only way to avoid the explosion and collateral damage.
