

Branch Design Services

Introduction

Diebold Nixdorf is experienced assisting banks and credit unions during the preliminary design phase of a branch project. Our designers balance creativity and functionality around products and technologies to make consumer transactions easier, safer and more convenient. Our concepts blend staff efficiency, self-service and assisted service to create a positive consumer experience. We use advanced CAD software to deliver renderings and engaging visuals to bring branch concepts to life. Our services include:

- Space allocation studies
- Branch interior & exterior Design
- Technology integration
- Branch Transformation design
- Site layout including drive-up studies
- 3D conceptual renderings

Tiered Services to Meet Your Needs

We offer three levels of branch design services to meet every customer's specific needs. It should be noted, any of these services are not a substitute for a licensed (AIA) architect.

Basic services includes 2D floor plans to define areas where staff and customers interact and space for supporting back office operations. We also assist in preliminary site-related services including parking, drive-up equipment and building placement, along with traffic site ingress/egress studies.

Intermediate services include preliminary 3D design to give better understanding of the overall branch space. Walls, ceilings and other elements are defined to better communicate the aesthetics of the branch environment.

Comprehensive services takes the design to a realistic level. By adding colors, materials, lighting and branding to the design, we bring clarity to how your branch will look the day customers come through the door. Included in "comprehensive" services, we provide CAD designs to assist the project architect when preparing formal drawings and documents used for permitting, bidding and construction purposes.

"We assist designing relevant branch destinations, giving the best opportunity to build stronger relationships with existing customers while providing a memorable experience to attract new ones."

Benefits of Diebold Nixdorf's Branch Design Services

Let's face it, the retail branch continues to evolve and it's tempting to quickly adopt emerging technologies. However, this strategy doesn't guarantee success unless properly implemented to fit your business goals. We believe technology should complement building lasting relationships with customers, and not be a distraction. Our holistic design approach balances technology and services placement in any environment allowing staff to leverage each customer engagement to its fullest potential.

- We help quickly navigate through the preliminary design phase, shortening a project timeline and ultimately, saving you design-related expenses.
- We specialize in "transformation" projects, including repurposing of existing retail spaces into financial destinations. Remodel and renovation of existing facilities are typically a wiser and more cost-effective option than building new.
- We're about the details. Teller space, pods, sales, technology and consultation areas require proper attention for operational efficiency while positively impacting the customer... and we prioritize privacy and security.
- We've been assisting customers in branch design for many years, so we have successes and challenges to share from previous projects.
- We produce high quality, 3D renderings that bring concepts to life. This allows key decision makers to fully understand the project before any construction begins.
- We love collaborating with customers, and that includes our customer's architect and facility team. It's vitally important to include the vision and ideas of multiple stakeholders in any design process.

Our team looks forward to discussing your project to determine the service that best fits your branch design project needs.
