Diebold Nixdorf's solutions enhance your consumer's financial experience and maintain a personal touch at the drive-up and within your branch. Add convenience to the lives of your consumers and efficiency to your operations while maintaining an appropriate level of security with Diebold Nixdorf's facility and barrier solutions.

# Facility Solutions

## FACILITY VAT SYSTEMS

Provides creative service solutions that lower operating costs, reduce expenses, improve consumer service, and increase safety for your consumers and employees.

**VAT 21GX** - This overhead delivery pneumatic tube system is the industry benchmark for durability, sophistication and reliability with remote blowers for quiet operation and environmentally friendly design.

**Facility VAT Diverter** - Allows a carrier to be delivered to one of two pre-determined teller work stations with the push of a button. Maximized teller efficiencies while supporting branch transformation objectives. Designed to maximize teller efficiencies.

**VAT 23GX** - This low maintenance overhead solution with integral blower is ideal for refresh opportunities.

**VAT 30GX** - The latest merchant delivery solution for transporting commercial deposits.

**VAT 42** - Underground drive-up system.

**VAT Tubing** - Delivery mechanism for site specific routing of the carrier from outside to inside

## 816 AUDIO™ SYSTEM

Provides clear duplex communication between up to eight operators and up to 16 consumers.

**Queuing** - Helps reduce teller stress and increase efficiency by identifying the order of consumer greetings and services.

## CLOSED-CIRCUIT TELEVISION (CCTV) FOR VATS

Enhances the communication process between a consumer and operator. When physical or line-of-site contact with the consumer is not available, video records for consumer transactions are required, or the institution wants to provide an on-screen marketing message capability.

**One-Way** - Produces the operator a video picture of the consumer, combined with two-way voice communication. This is an excellent tool for the consumer's identification prior to completing a financial transaction.

**Two-Way** - Uses audio and video to allow the operators to communicate with the consumers while both view one another. Excellent tool that enables on-screen marketing messages.

## TRANSACTION DRAWER

Offers direct contact between a consumer and operator, enhancing security and operator comfort. For enhanced security and operator comfort, the electronic and manual transaction drawers provide direct contact between consumer and operator. Enable convenience for the consumer within the drive-up.

## BULLET-RESISTIVE VISION WINDOWS

Drive-up windows are UL-tested, durable, bullet-resistive frames and glass to increase security and safety within a facility available in both standard and deluxe. Available in both UL Level 1 and 3.

## LED TRAFFIC CONTROL SIGNAGE

Utilize the latest energy efficient lane signage (i.e. Open/Close, ATM or Commercial)

## REMOTETELLER™ SYSTEM (RTS)

High-throughput, low-cost, non-card-based approach to in-branch banking enabling consumer-friendly service from a remote location.

Remote Teller System takes the attributes of the drive-up pneumatic banking and two way CCTV technology for the consumer and moves the financial institution employee securely inside the facility.

## POINT-TO-POINT SYSTEM

Deliver forms, transport documentation and other supplies quickly and efficiently within the facility without interrupting consumer service.

**Dual-sided 2-way** - Capacity to transport payloads of up to six pounds up to 500 feet; loose 4.5" carrier utilizing dual-sided access terminals with remote blowers for quiet operation.

**Six-inch-round diameter** - Capacity to transport payloads of up to five pounds up to 1,000 feet; great for ATM cash replenishment.

# Barrier Solutions

## VAULT SYSTEMS

Ensure the highest levels of security by exceeding the Bank Protection Act and Insurance Services Office standards.

**Concrete Modular Vault** - Maximize floor space with modular vault panels that are lighter and thinner than site-poured concrete walls.

**Super-Strength Modular Vault** - Lighter weight, stronger vault wall maintaining a high degree of security.

**Safe Deposit Box Systems** - Secure storage of valuables within the security of a vault.

**Safe Deposit Box Locks – single or double nose** - Provides flexible security with UL-Listed double-nose key locks or optional single-nose locks for self-service environments.

## ELECTRONIC VAULT ATTENDANT (EVA) II

Provides self-service access into the safe deposit box area, adding consumer convenience and branch efficiency without compromising security while adding a layer of auditing and box management.

## SAFE DEPOSIT (SD) VERIFICATION

Safe Deposit (SD) Verification replaces the manual system with user-friendly biometric recognition. Safe Deposit-box owners choose how they gain access with fingerprint, facial recognition or pin entry. The system verifies both the box owner and the financial institution employee for enhanced security and audit capabilities. Financial institutions can quickly, in real-time, review and audit access from anywhere and improve operational efficiency by no longer needing to manually review signature cards at the individual branches.

## VAULT DOORS

Meet the need for secure, convenient, full-featured performance in UL-Listed Class I and II doors.

**DN Vault Door** - Excellent security in a modular vault system or poured onsite vault. UL Class M, Class 1, or Class 2 rated doors provide protection against burglaries; enables the safekeeping of valuables and documents.

## VAULT LOCKER SYSTEMS

Teller lockers are designed for storage of cash trays and other valuables in a variety of sizes or configurations.

## BURGLARY AND FIRE-RESISTIVE SAFES AND ACCESSORIES

We have a wide range of sizes and configurations to meet specific needs.

**B and C - Rated Security Chests** - Superior quality and reliability you can trust at an economical price.

**B and C - Rated Depository Safes** - Provide immediate deposits and storage for cash, jewelry and miscellaneous valuables.

**CashGard Depository Composite Safes** - Safes combining unique burglar-resistant features with flexible size and configuration options.

**MasterGard Elite Composite Safes** - Defense against theft and fire; features flexible size and configuration options.

**Safe Interiors** - In a variety of size and configurations, safe locker systems provide superior protection and are available in a variety of depth dimensions and capacities.

## LOCK AND KEY MANAGEMENT SOLUTIONS

Ensure protection for all assets secured within your facility with a variety of functions such as UL-Listed, dual control, auditing capabilities and multiple unique user codes.

**VeraPass®** - Complete electronic locking key management system

**Mechanical Locks** - Mechanical lock access into safe

**Electronic Locks** - Digital keypad access into safe

**OptiGard®** - Allow IP control and audit access to safes to prevent burglaries and internal theft

## SMART DEPOSIT SAFE

The Smart Deposit Safe is an intelligent-deposit safe designed to manage large volumes of cash quickly and correctly, so you can mitigate the costs and risks associated with handling cash.

## AFTER-HOUR DEPOSITORIES (AHD)

Extend availability for consumers while offering secure retrieval systems for convenient remote deposit capabilities.

## SECUROMATIC®

Available in manual or electric operation models, the Securomatic® Depository can be customized with a variety of alarm packages, safe sizes.

# Teller Stations

## ACCENT FURNITURE SOLUTIONS

Custom, modern, flexible designs with innovative features allowing facilities to promote a brand and image.

## BANDIT BARRIER

Custom bullet-resistive rated glass for a physical security robbery deterrent while protecting the tellers in the branch.

## UNDERCOUNTER

Efficient, expandable and secure, our metal under-counter bank teller equipment is suitable for both financial and commercial applications. Engineered to high quality standards with modular flexibility to meet teller everyday needs.
