A HISTORY OF COMMITMENT

Each financial institution has its own unique needs and circumstances. At Diebold Nixdorf, we get this. Not only do we understand these diverse needs, we allow those differences to guide us when designing products.

With more than 140 years of experience, Diebold Nixdorf has the ability to go beyond just recommending hardware—and we do. Equipment planning and implementation capabilities, as well as the capacity to provide superior service after the sale, are just a few benefits Diebold Nixdorf customers enjoy.

AN INVESTMENT IN QUALITY

Don't let the light-gauge terminology fool you, these lockers are made to withstand rugged, day-to-day activity.

Diebold Nixdorf Security Solutions

ENHANCING THE CONSUMER EXPERIENCE

Diebold Nixdorf light-gauge Lockers are built to last. They are designed to securely store a variety of items, such as cash trays, coin, check starter kits, bank checks, drafts and loan collateral documents.

To give you maximum flexibility, the lockers are built using industry standard proportions, giving you the freedom to combine units to build a wall system in a vault or compartmentalize the interior of a chest. You get a personalized solution from standard components without incurring high costs associated with custom designed installations.

LOCKERS FOR DIFFERENT NEEDS

From Teller to Bulk Storage Lockers, Diebold Nixdorf can meet your storage and security needs. Bulk Lockers feature adjustable shelves which are readily positioned by aligning clips with grooves in the Lockers' body. Each shelf supports up to 400 pounds.

Designed to store teller cash trays and less bulky items, Teller Lockers represent true convenience and functionality.

Single-key, double-key, electronic or combination lock variations provide enhanced security to your valuables. Lockers are available in right or left swing door configurations.

SECURITY WHERE IT'S NEEDED

While the vault itself provides security, Diebold Nixdorf Lockers are designed to provide protection from surreptitious entry and moderate force. Bulk Locker bodies and doors are constructed of double-wall, 16-gauge sheet steel. Door fronts are stainless steel and both doors and bodies are a half-inch thick. Interior and exterior surfaces are painted gray. All models are 20-inches-deep to facilitate installation in either vaults or security chests.

On large door units, flat boltwork engages at the top, bottom and side for increased resistance against forced entry.

In addition, deadbolts are used on the hinge side of the opening to fully secure the frame when the door is closed.

Diebold Nixdorf Light-gauge Lockers are excellent examples of our broad-based expertise and leadership in designing well-functioning systems for financial institutions and other security-minded businesses. So when you purchase security equipment, work with the company that can provide you the best total solution—Diebold Nixdorf.
