

# The Best Line of Defense Against Theft and Fire

Diebold's MasterGard Safe protects your assets from unplanned events and provides an additional line of defense for branch personnel.

## Built to Last

- The Diebold MasterGard is a composite safe that is comprised of a composite material surrounded by an inner and outer jacket of steel plates. This design provides maximum protection while offering lower shipping weights than most composite designs.
- The two-hour 350° manufacturer's fire protection label documents that paper inside the unit has successfully withstood external temperatures up to 1,850 degrees Fahrenheit for two hours.
- Doors are secured by massive chromed locking bolts which are hand activated and seat into individual secure bolt cups.

## Enhance Security

- Protection Ratings: The Underwriter's Laboratories TL-30 label assures that the MasterGard design and locking system have passed a 30-minute timed performance test for burglar resistance.
- All MasterGard units are designed to resist forced-entry attacks. The handles are designed to shear or break off when the door is closed and an attack is in progress.
- Select models have been specifically designed for Safe Deposit Box installation, and Standard Safe Interior installations.

# Protection against Threats, Fire and Attacks for Maximum Security

## STANDARD AND SAFE DEPOSIT BOX APPLICATIONS

The MasterGard line has been designed to accommodate standard applications where safe interiors and teller lockers are required. Additionally, two unique models are available for Safe Deposit Box applications. The Safe Deposit models include the only double door safe that can accommodate two full stacks of safe deposit boxes in one contained unit. This saves money because you are not buying two safes to accommodate the need, but only buying one correctly sized unit. A standard single stack Safe Deposit Box safe is also available. The new MasterGard Safe Deposit Boxes offer not only the TL-30 burglar rating but are also manufacturers rated for a two-hour 350° fire rating. For peace of mind when a safe is used for safe deposit applications, the MasterGard solution is in a class by itself.

## COMBINATION OF TWO PROTECTION RATINGS

Diebold's MasterGard product line provides two types of protection; both physical protection from attack and fire protection are incorporated into a single design. The Underwriter's Laboratories Inc. TL-30 label assures the MasterGard design and locking system have passed the 30-minute timed performance test for burglar resistance. The two-hour 350° manufacturer's fire protection label documents that paper inside the unit has successfully withstood external temperatures up to 1,850° for two hours.

## UNIQUE BURGLAR-RESISTIVE FEATURES

The MasterGard Safe design allows for a reduced weight-to-volume ratio. The walls are made from high density composite material surrounded by an inner and outer jacket of steel plates. This design provides maximum protection while offering lower shipping weights than most composite designs. In addition, doors are secured by massive chromed locking bolts which are hand activated and seat into individual secure bolt cups. All MasterGard units are designed to resist forced-entry attacks. The handles are designed to shear or break off when the door is closed and an attack is in progress. Also a dead bolt system prevents the door from being removed during a forced attack.

## ADDITIONAL STANDARD SECURITY FEATURES

- Dual auxiliary spring-loaded relocking device, activated by a punching attack.
- Locks and relocker protected by a large drillshattering hard plate.
- High strength steel hinges with vertical adjustment.
- Electronic combination lock offering over a million combinations.

## CUSTOMIZABLE OPTIONS

The MasterGard is designed for flexible interior organization. A wide variety of options are available including lockable storage compartments for bulk items, cash trays, teller lockers, and safe deposit boxes on certain models.

## ADDITIONAL OPTIONS:

- Choice of electronic alarm packages, from single door contact to full alarm packages with heat, sound, and seismic detection.
- Key-locking handles for flexible day-time protection.
- Wide range of color options.
- Adjustable, and or fixed welded shelf systems.
- A wide variety of mechanical and electronic locks, some capable of IP Networking.

## Specifications

### MODEL NUMBER

- 47880

### EXTERIOR DIMENSIONS

- 55"H X 46"W X 32 13/16"D

### INTERIOR DIMENSIONS

- 48"H X 39"W X 24"D

### WEIGHT

- 3,165 LBS

### MODEL NUMBER

- 47895

### EXTERIOR DIMENSIONS

- 79"H X 46"W X 32 13/16"D

### INTERIOR DIMENSIONS

- 72"H X 39"W X 24"D

### WEIGHT

- 4,292 LBS

## SAFE DEPOSIT BOX MODELS

### MODEL NUMBER

- 47898

### EXTERIOR DIMENSIONS

- 77"H X 40"W X 34 13/16"D
